Question 1:

```
#include <iostream>
using namespace std;
int main()
{
cout<<"Hadith from Al-Bukhari #7392 which Abu Huraira Reports the Messenger of Allah (pbuh) as saying, \n\"Allah has ninety-nine Names, one-hundred less one; and he who memorized them all by heart will enter Paradise.\"";
return 0;
}
```

Question 2:

```
#include <iostream>
#include <cmath>
using namespace std;

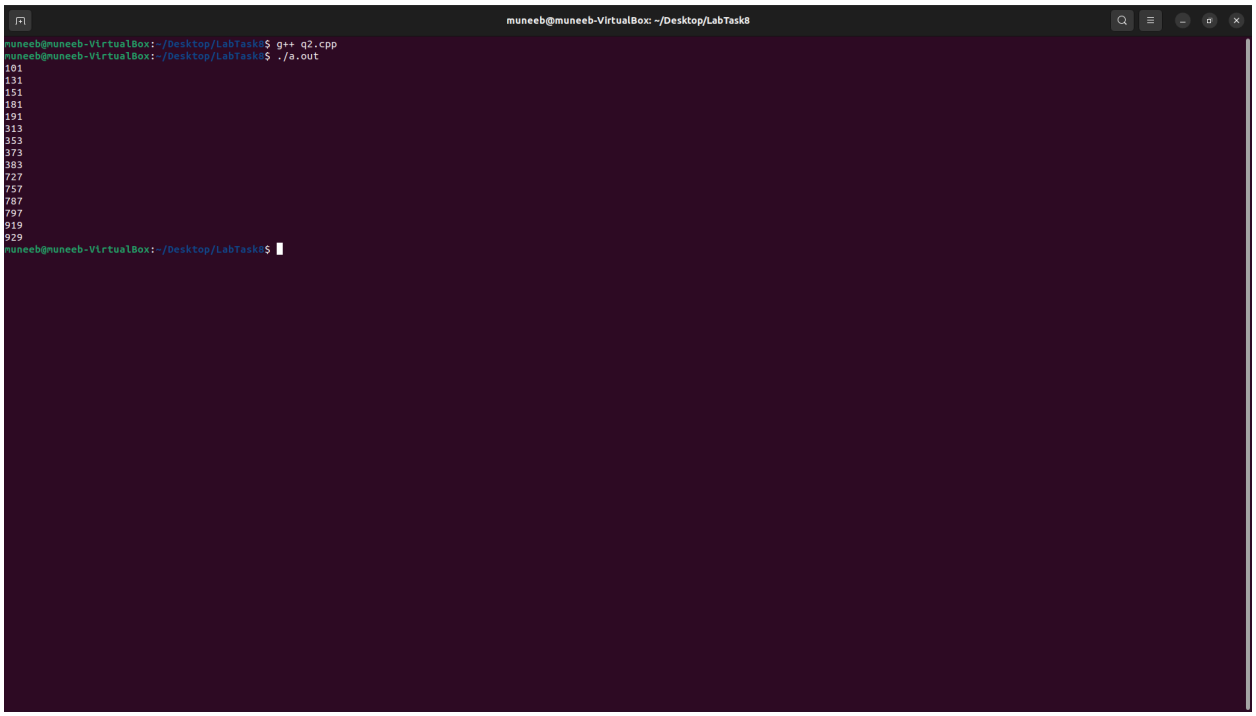

int main()
{
for (int num = 100 ; num >= 100 && num <= 999; num++)
{
   bool isPrime = true;
   for (int i =2 ; i <= sqrt(num) ; i++)
                {
                        if ( num % i == 0)
                        {
```

```
                                isPrime = false;
                                break;

                        }
                }

    bool isPalindrome = false;
    int digit1 = num % 10;
    int digit2 = num / 100;
    if (digit1 == digit2)
    {
            isPalindrome = true;
    }

    if (isPalindrome && isPrime == true)
            cout<<num<<endl;
}
return 0;
}
```

Question 3:

```
#include <iostream>
using namespace std;
int main()
```

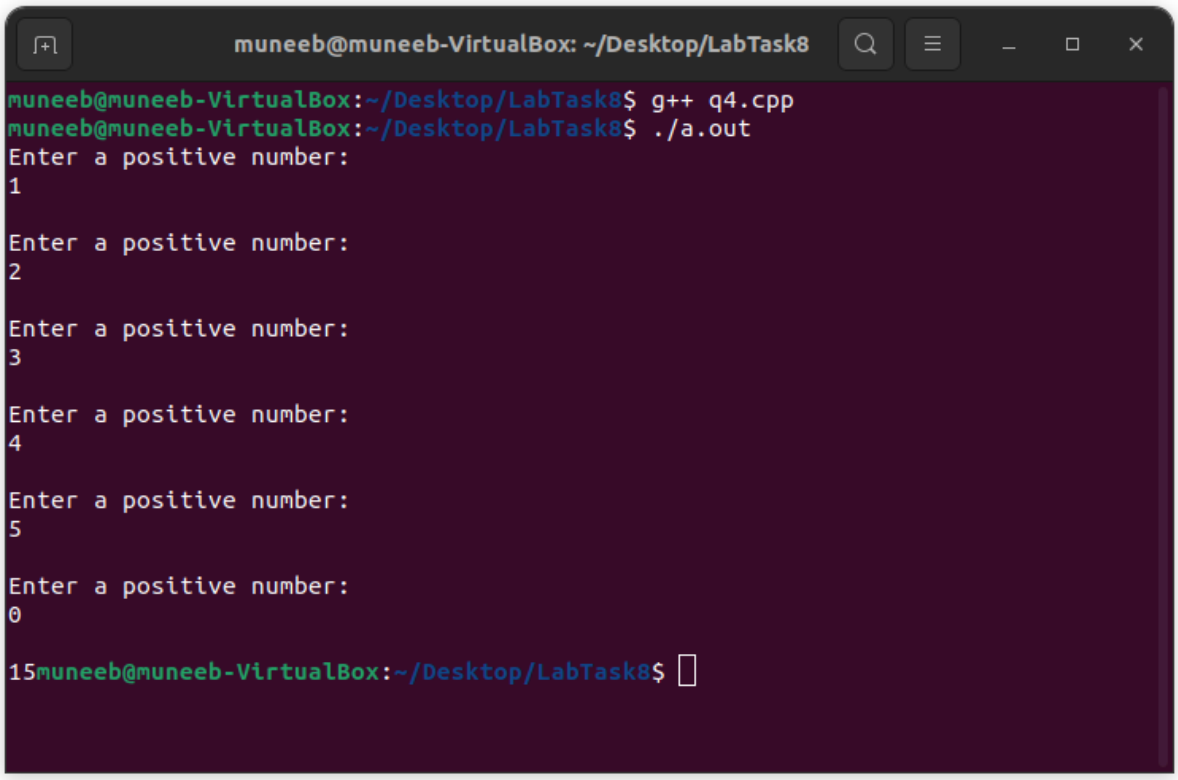

```
{
int num = 1, sum = 0;
while (num > 0)
{
   cout<<"Enter a positive number: "<<endl;
   cin>>num;
   cout<<endl;
   if (num > 0)
   sum = sum + num;
}
cout<<sum;
return 0;
}
```

Question 4:

```
#include <iostream>
using namespace std;
int main()
{
int num = 1, sum = 0;
do
{
```

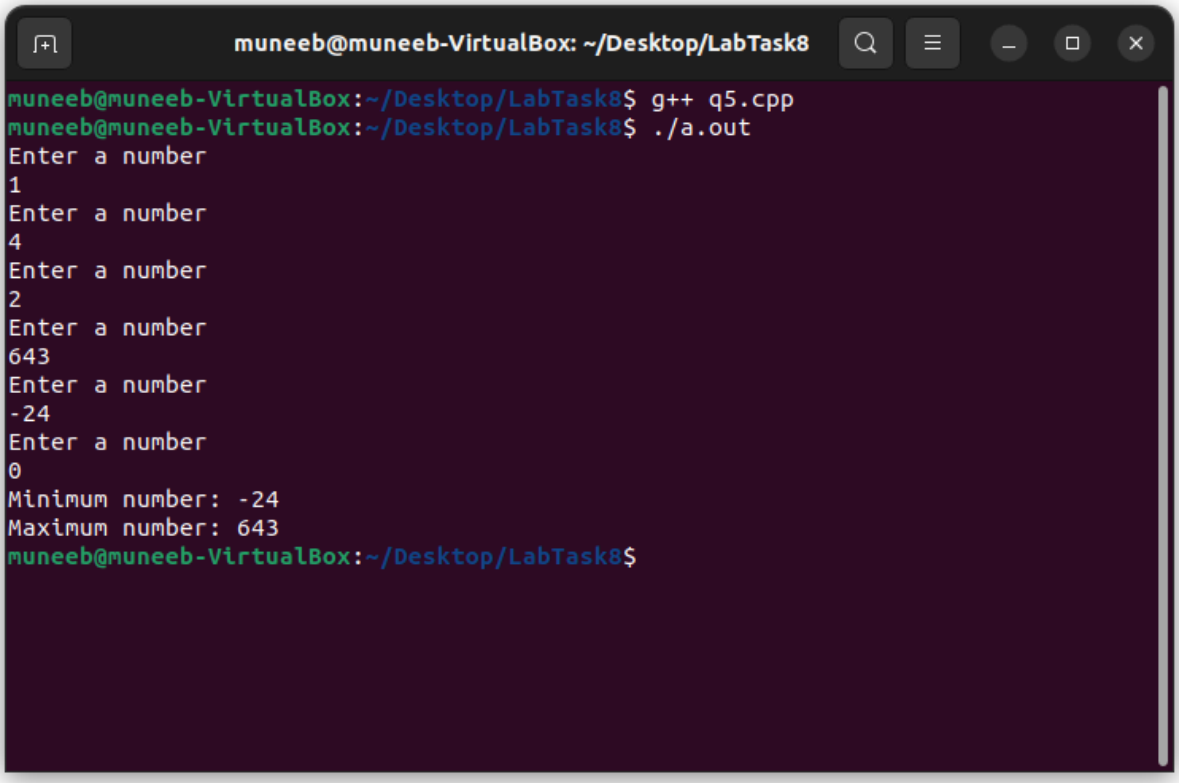

```
    cout<<"Enter a positive number: "<<endl;
    cin>>num;
    cout<<endl;
    if (num > 0)
    sum = sum + num;
}
while (num > 0);
cout<<sum;
return 0;
}
```

Question 5:

```
#include <iostream>
using namespace std;
int main()
{
int max = 0 , min = 0 , num = 1;
while (num != 0)
{
    cout<<"Enter a number"<<endl;
    cin>>num;
    if (num > max)
            max = num;
```

```
    if (num < min)
        min = num;
}
cout<<"Minimum number: " << min <<endl;
cout<<"Maximum number: " << max << endl;
return 0;
}
```

Question 6:

```
#include <iostream>
#include <cmath>
using namespace std;
int main()
{
int num = 1;
while (num > 0)
{
    cout<<"Enter an integer: "<<endl;
    cin>> num;
    int i = 2;
    bool isPrime = true;
    while ( i < num)
    {
```

```
            if (num % i == 0)
            {
                isPrime = false;
                break;
            }
    i++;
    }
            if (isPrime == true)
            cout<<"It is a prime number.\n";
            else
            cout<<"Not prime.\n";
}
return 0;
}
```
