# FSE PROJECT

*Presented by: Kabeer , Muneeb , Okasha*

Better Split

# INTRODUCTION

Better Split is a desktop application developed to help groups easily manage and split shared expenses. Whether among friends, roommates, or colleagues, it allows users to track spending, divide costs fairly, settle debts efficiently, and maintain clear financial records.

The project was built using agile practices, with proper sprint planning, user story creation, design documentation, and MVC architecture. Our goal was to create a user-friendly, intuitive, and secure platform for simplifying expense management in group settings.

# ADVANTAGES

- Simplifies managing shared expenses.
- Automatically calculates and divides costs.
- Tracks and settles debts efficiently.

Better Split

# CONSTRAINTS

- Limited to desktop use (not mobile app).
- Requires user input for proper expense categorization.
- Dependence on CSV files for data import/export.

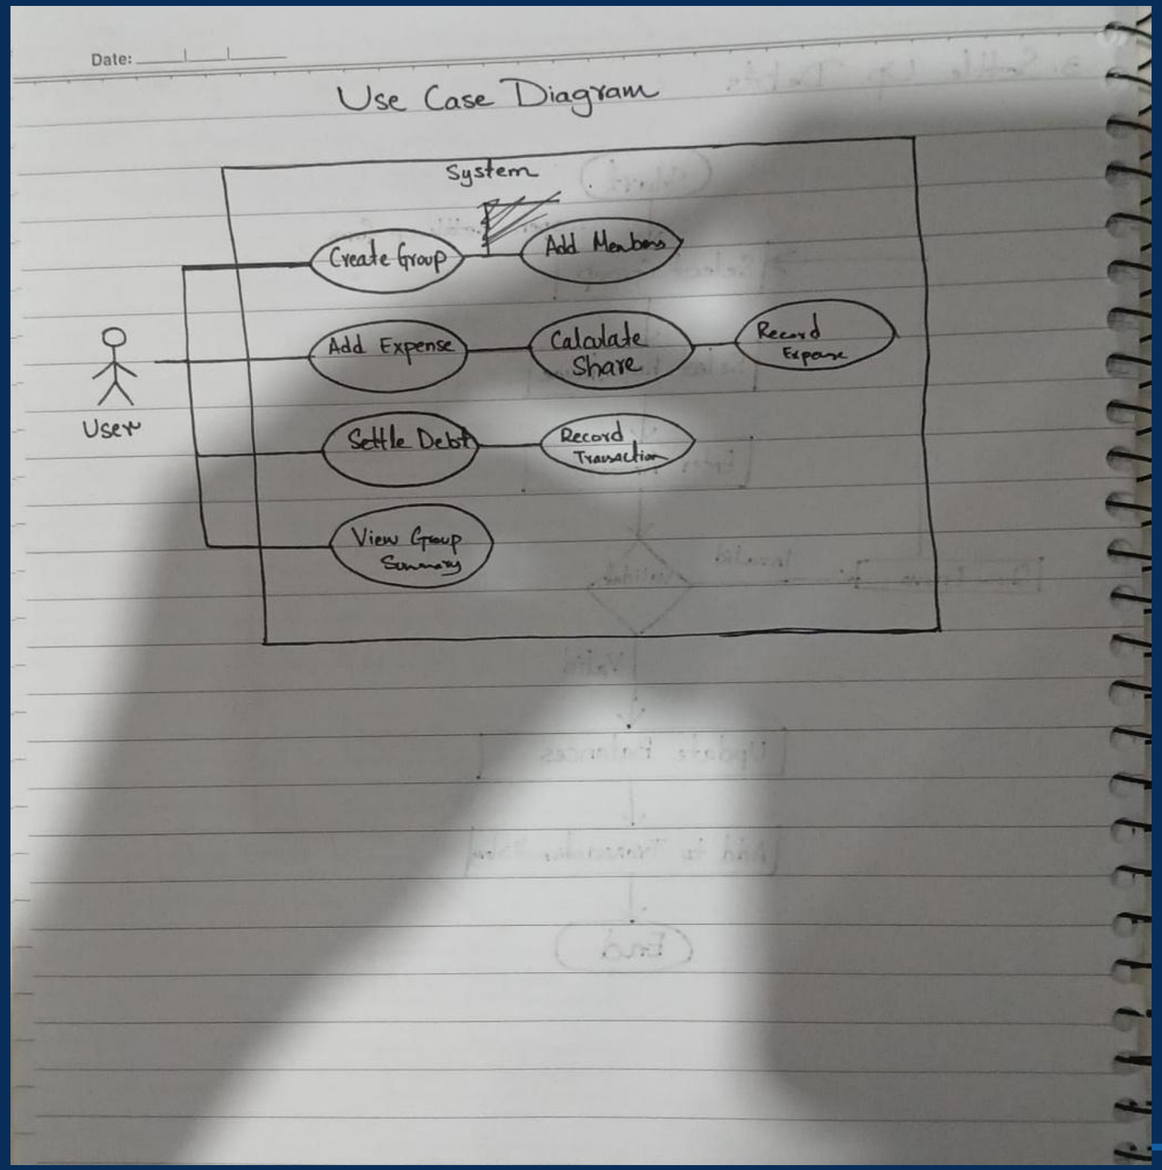

Better Split

# NFR

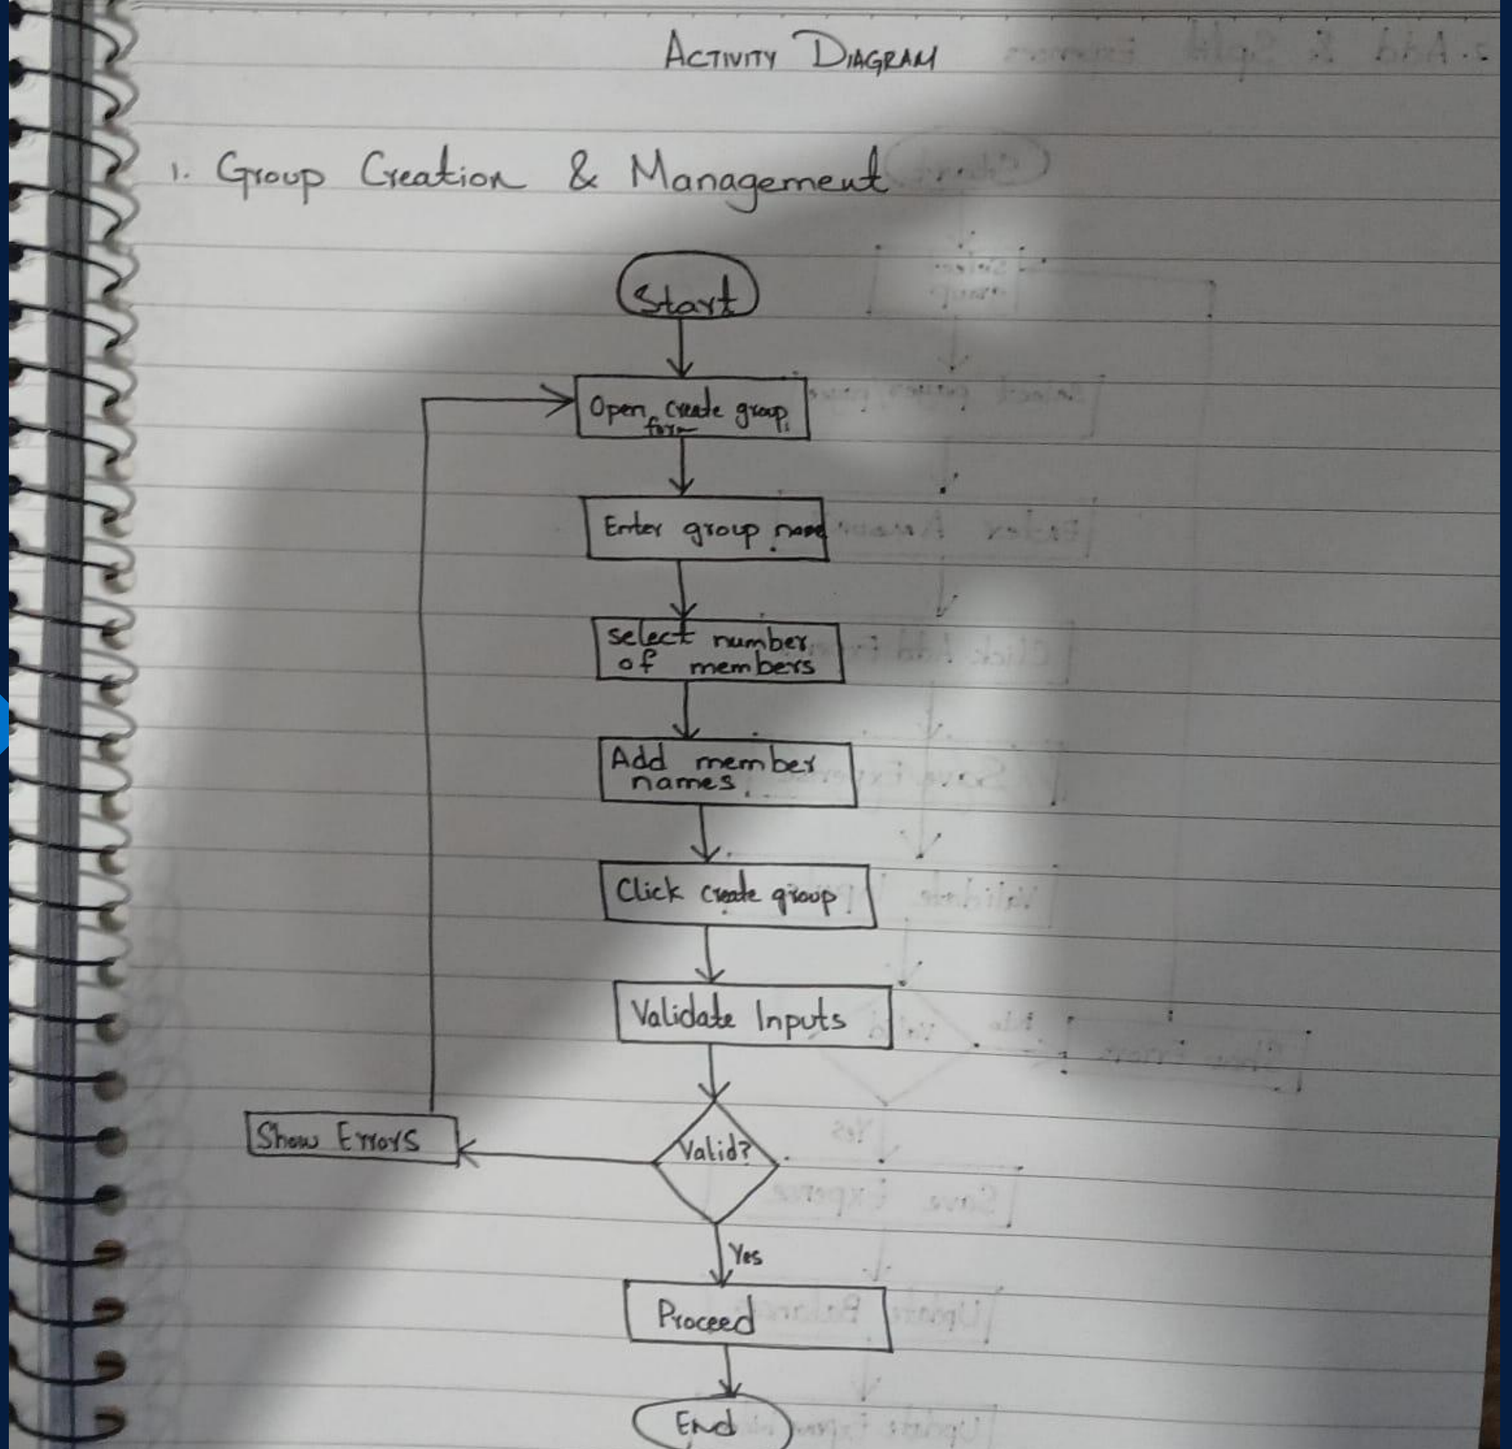

1. Performance: The app must handle groups with up to 100 members and process expense data efficiently.
2. Usability: The interface must be intuitive and easy to navigate, ensuring a seamless user experience.

# IMPLEMENTATION SS

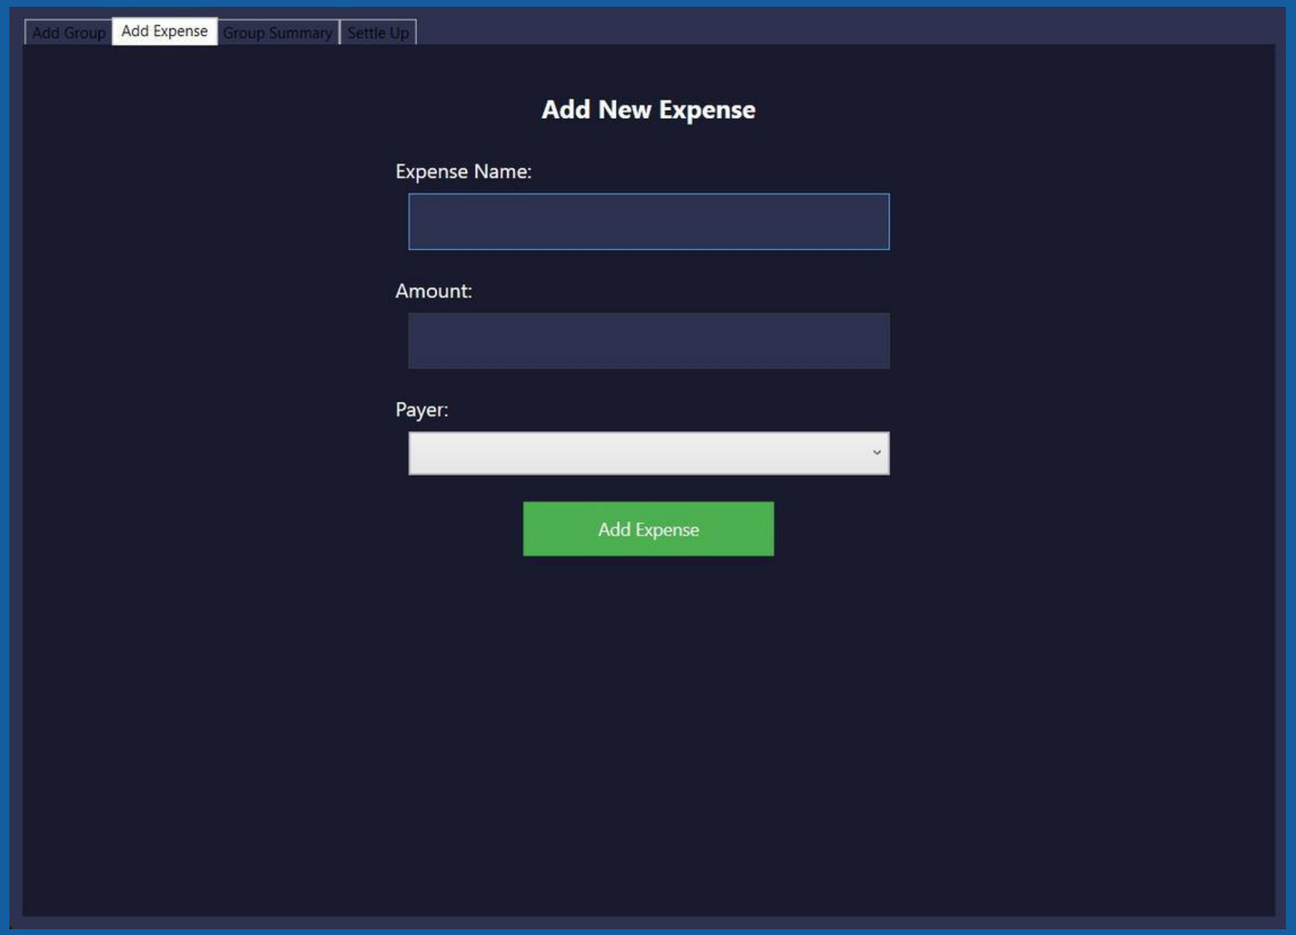

Better Split

Better Split

# Work Division

- Muneeb: Backend development (Model and Controller), expense logic, testing.
- Okasha: Frontend development (View), UI design, documentation.
- Kabeer: Integration, project management, Trello board maintenance, final report.

Better Split

# Lesson Learnt

- MVC Architecture: Gained practical experience in separating data, user interface, and control logic.
- Agile Methodology: Learned the importance of incremental development and task management.
- Team Collaboration: Emphasized the importance of clear task division and constant communication.
